Education

SR University, Bachelor of Technology in Computer Science and aiml Oct 2022 – Apr 2026

- GPA: 9.2/10.0
- **Coursework:** Machine Learning, Data Structures, Design and Analysis of Algorithms, Object Oriented Programming, Operating System, Network Security, C, Python, Java

Experience

Machine Learning Intern Teachnook. [\(Certificate\)](#) 1 June 2024 – 31 July 2024

- Developed and implemented a Convolutional Neural Network (CNN) model to classify clothing items using the Fashion MNIST dataset.
- Achieved 8.5 in classifying 10 categories of clothing.
- My role as the team leader involved overseeing the project's development and ensuring its successful implementation
- Gained hands-on experience with Python libraries such as TensorFlow/Keras and NumPy.
- Strengthened skills in data analysis, model training, and evaluation within a collaborative learning environment.

Technical Skills

Languages: C, Python, Java

Tools & Frameworks: Git, Visual Studio

Web Programming: HTML, CSS, JavaScript

DataBases: SQL, MYSQL, PLSQL

Domain Knowledge: Machine Learning, Data Science, Data Analytics

Projects

Machine Learning

EPL Match Prediction

- completed a project using the iris dataset from Kaggle, where I trained and tested data to classify different species of iris flowers
- I implemented and evaluated various machine learning models to determine the most accurate approach for this classification

Project on spotify songs prediction using machine learning models

- I worked on a project titled "Spotify Songs Prediction using Machine Learning Algorithms," where I developed a model to predict the popularity and features of songs on Spotify
- By analyzing a large dataset of songs, I applied various machine learning algorithms to predict attributes such as genre, mood, and potential hit status. This project involved data preprocessing, feature engineering, and model evaluation to achieve accurate and reliable predictions

Personalized Text Generator using GPT-2 and Gradio

- Developed a personalized text generation system using GPT-2 with a user-friendly interface built on Gradio for real-time interaction.
- Fine-tuned the model for improved accuracy and optimized performance to generate relevant, context-specific text quickly.

Emotion-Based Music Player

- Developed a system that uses facial expression analysis to detect emotions and play matching music from a predefined playlist.
- Leveraged tools like OpenCV and machine learning algorithms for accurate emotion recognition and seamless music playback.

Web Development

Connect4-Game

- Built a two-player Connect 4 game using JavaScript, HTML, and CSS, implementing real-time gameplay with a dynamic 6x7 grid and player interaction.
- Designed an intuitive user interface with CSS, including features for piece placement, turn-taking, and winning condition checks for horizontal, vertical, and diagonal lines.

To-Do List Website Developer

- Developed a responsive to-do list website using HTML, CSS, and JavaScript, allowing users to add, edit, and delete tasks with a clean, intuitive interface.
- Implemented localStorage for persistent data storage, ensuring tasks are saved across sessions, and included features for task completion tracking and dynamic task updates.

Certifications

Introduction to operating system.

[\(Verify\)](#)

Data Structures

[\(Verify\)](#)

Introduction to Networks.

[\(Verify\)](#)

Introduction to Databases.

[\(Verify\)](#)

Version control with Git

[\(Verify\)](#)

Introduction to Git and GitHub.

[\(Verify\)](#)

AI For Everyone.

[\(Verify\)](#)

Theory of Computation

[\(Verify\)](#)
